Sodium chlorate

Nouryon: your reliable sodium chlorate supplier

Nouryon is uniquely positioned to meet your needs for consistent, high quality sodium chlorate.

From our production facilities in Brazil, Canada, Chile, France, Finland, Sweden and USA, we are able to effectively serve our customers. Our world class manufacturing technology, application know-how, optimized supply chain and global logistic solutions provide customers with an advantage for their operations.

In certain geographic regions, Nouryon maintains a dedicated fleet of trucks, isotainers and railcars; we also offer flexible specialty packaging solutions in the form of super-sacks and drums. We ship sodium chlorate to customers all over the world, under the brand name Eka.

Nouryon in-house logistics and customer service experts will ensure your order is handled quickly, accurately and delivered on-time.

Industrial applications

Sodium chlorate is a versatile product and is used in a variety of applications.

It is the preferred intermediate for sodium perchlorate and sodium chlorite manufacture; other common industrial applications are for the surface treatment of metals and cupric chloride etch regeneration.

In the mining industry, sodium chlorate is used during the extraction process for a variety of metals. It is also a key ingredient in fireworks and used in the production of oxygen candles, utilized on aircraft and submarines, and by manufacturers of breathing apparatus for firefighters and mine rescue crews.

Sodium chlorate is also used as an intermediate in the generation of ferric chloride which is used as a flocculant in many industrial water treatment applications.

The major consumer of sodium chlorate remains the pulp and paper industry where it is used for chlorine dioxide generation; this use accounts for over 90% of all sodium chlorate produced worldwide.

Chlorine dioxide is a key bleaching agent and is used in the production of Elemental Chlorine-Free (ECF) bleached wood pulp for paper products all over the world. Other common applications for chlorine dioxide include use as a broad-spectrum biocide and primary disinfectant for potable and cooling water.

Safety First

Sodium chlorate is a powerful oxidizing agent available in both the crystal and solution forms manufactured and supplied by Nouryon. When handled correctly, associated risks are minimal.

Please refer to the latest product SDS in your local language for the most current regulatory information about the safety and handling of sodium chlorate. The PDS and Nouryon Sodium Chlorate Product Information Manual also have pertinent information; your Nouryon Representative will be able to provide you with these documents.

Characteristics and packaging

Sodium chlorate crystal is a white to off-white odorless crystalline solid. In aqueous solution, it is a clear, colorless to slightly yellow liquid. It is a very strong oxidizing agent and the crystals are very soluble in water. Sodium chlorate is available in various packaging types which are summarized in the table below.

For other packaging and unique needs, a member of our professional distributor network will be able to assist. Our distributors offer the same high-quality products and adhere to the ACC Responsible Care guiding principles.
