

Levasil CX4

Colloidal silica

Levasil CX4 is an alkaline non-aluminate modified, aqueous dispersion of colloidal silica that is approximately 50% solids by weight. The silica dispersion is sodium stabilized and the amorphous silica particles carry a negative surface charge. The silica particles are discrete, have a smooth, spherical shape, and are present in a narrow particle size distribution. The physical appearance of the dispersion is a white product, slightly more viscous than water. Levasil CX4 is produced for world-wide distribution

CAS number
7631-86-9

Characteristics

Silica	50 wt%
Density	1.4 g/cm ³
Specific surface area	40 m ² /g
pH	9.8
Viscosity	10 cP
Na ₂ O	0.10 wt%

Applications

Levasil CX4 is a specialty large particle product used for the interlayer formation of fire resistant glass elements.

Storage

Levasil CX4 should be transported and stored at a temperature of 5-50°C (40-120°F) If the silica dispersion is allowed to freeze, the silica will irreversibly precipitate. For bulk storage, the tank should be sealed and constructed of plastic, fiberglass reinforced plastic, or stainless steel. For packaged goods, any translucent packages should be stored out of direct sunlight or bright light. When stored for a longer period of time sedimentation may occur. To ensure optimal product performance we recommend stirring before use. Ensure good hygiene during handling to avoid bacteria contamination. Under recommended conditions, Levasil CX4 has a shelf life of at least eighteen months after production.

Packaging and transport

Levasil CX4 is available in bulk and packaged quantities.

Safety and handling

Before handling this material, review the corresponding Material Safety Data Sheet. Colloidal silica products are aqueous dispersions of amorphous silica. Colloidal silica is not classified as harmful, but as mildly irritating. Because the products can have a drying effect on the skin, protective gloves should always be used. In case of skin contact, wash the area of contact with plenty of water. The use of safety glasses is always recommended. In case of eye contact, rinse with large amounts of water and seek professional medical advice.
