Thioplast® EPS35 is a purely aliphatic epoxy-terminated polysulfide polymer. This worldwide unique product is used in combination with conventional epoxy resins to manufacture high-performance heavy-duty adhesives and coatings featuring excellent primerless adhesion, low-temperature impact and crack resistance, improved chemical resistance and anti-corrosion properties.

**CAS number**

*Notes: Typical properties, not to be construed as product specifications.*

**Applications**

Thioplast® EPS 35 is primarily used in metal or concrete coatings to improve the flexibility, impact and thermal shock resistance as well as the resistivity against chemicals, oils, corrosion and low-temperature cracks. Thioplast® EPS 35 is compatible with most Bisphenol A, A/F, F and Novolac resins and can also be used in epoxy-based adhesives and sealant formulations. As with any product, the use of Thioplast® EPS 35 in a given application must be tested (including, but not limited to field testing) in advance by the user to determine suitability. Thioplast® EPS 35 is used in two-component systems. Typical curatives are linear or cyclic aliphatic or aromatic amines.

**Storage**

Thioplast® EPS 35 is a reactive Pre-polymer. Protection against contact with air, moisture and temperatures over 25°C (77°F) during transportation and storage is needed. Containers should be firmly closed after each use. Under appropriate storage conditions the shelf life of this product is 12 months.

**Packaging and transport**

Thioplast® EPS 35 is available in 200 l drums or 1000 l IBC. Other packages available on request.

**Safety and handling**

Full information on the safe handling is available in the Safety Data Sheet (SDS). Further details are available upon request.
