

Trigonox B-C30

Di-tert-butyl peroxide

Efficient initiator (30% active ingredient in odorless mineral spirits) for the production of Low Density Polyethylene (LDPE). It is used for both tubular and autoclave processes. In most cases a combination with other peroxides is used to ensure a broad reactivity range

CAS number
110-05-4

EINECS/ELINCS No.
203-733-6

TSCA status
listed on inventory

Molecular weight
146.2

Active oxygen content peroxide
10.94%

Concentration
3.17-3.39%

Specifications

Appearance	Clear liquid
Assay	29.0-31.0 %
Color	≤ 30 Pt-Co
Hydroperoxides as TBHP	≤ 0.03 %

Characteristics

Density, -10 °C	0.810 g/cm ³
-----------------	-------------------------

Applications

Polymerization of ethylene Trigonox B-C30 is an efficient initiator for the production of Low Density Polyethylene (LDPE). It is used both for tubular and autoclave processes. In most cases a combination with other peroxides is used to ensure a broad reactivity range.

Half-life data

The reactivity of an organic peroxide is usually given by its half-life ($t_{1/2}$) at various temperatures. For Trigonox B-C30 in chlorobenzene half-life at other temperatures can be calculated by using the equations and constants mentioned below:

0.1 hr	at 164°C
1 hr	at 141°C
10 hr	at 121°C
Formula 1	$k_d = A \cdot e^{-E_a/RT}$
Formula 2	$t_{1/2} = (\ln 2)/k_d$
Ea	153.46 kJ/mole
A	4.20E+15 s ⁻¹
R	8.3142 J/mole-K
T	(273.15+°C) K

Thermal stability

Organic peroxides are thermally unstable substances which may undergo self-accelerating decomposition. The lowest temperature at which self-accelerating decomposition may occur with a substance in the packaging as used for transport is the Self-Accelerating Decomposition Temperature (SADT). The SADT is determined on the basis of the Heat Accumulation Storage Test.

Method	The Heat Accumulation Storage Test is a recognized test method for the determination of the SADT of organic peroxides (see Recommendations on the Transport of Dangerous Goods, Manual of Tests and Criteria - United Nations, New York and Geneva).

Storage

Due to the relatively unstable nature of organic peroxides, a loss of quality will occur over a period of time. To minimize the loss of quality, Nouryon recommends a maximum storage temperature ($T_s \text{ max.}$) for each organic peroxide product.

$T_s \text{ Max.}$	40°C
Note	When stored according to these recommended storage conditions, Trigonox B-C30 will remain within the Nouryon specifications for a period of at least three months after delivery.

Packaging and transport

The standard packaging is a 1000 l composite Intermediate Bulk Container (IBC). Delivery in a 20 m³ Nouryon tank container is also possible in a number of countries. Both packaging and transport meet the international regulations. For the availability of other packed quantities consult your Nouryon representative. Trigonox B-C30 is classified as Organic peroxide type F; liquid, Division 5. 2; UN 3109.

Safety and handling

Keep containers tightly closed. Store and handle Trigonox B-C30 in a dry well-ventilated place away from sources of heat or ignition and direct sunlight. Never weigh out in the storage room. Avoid contact with reducing agents (e. g. amines), acids, alkalis and heavy metal compounds (e. g. accelerators, driers and metal soaps). Please refer to the Safety Data Sheet (SDS) for further information on the safe storage, use and handling of Trigonox B-C30. This information should be thoroughly reviewed prior to acceptance of this product. The SDS is available at nouryon.com/sds-search.
